

Netrunner Learn-to-Play Script

Zahya vs. Weyland

Side	Step	Action	Instructions
Corp	1	draw	Draw 1 card from R&D (your deck) into HQ (your hand). <i>(This is your mandatory draw — it happens at the start of every Corp turn.)</i>
Corp	2	install	The Corp has 3 available actions in each turn, represented by this icon: [click] (a <i>click</i>). Spend your first [click] to install Superconducting Hub face down in a new remote server.
Corp	3	advance	Spend [click] and 1[credit] (a <i>credit</i>) to advance the facedown card in your remote server. You place its first advancement token on it, so your identity triggers: you gain 2[credit].
Corp	4	install	Spend your final [click] to install Palisade face down as a piece of ICE protecting your remote server, in the outermost position.
Runner	1	play event	The Runner does not draw automatically at the start of their turn, but they have 4 available [click] (<i>clicks</i>) in each turn. Spend [click] and 5[credit] (<i>credits</i>) to play Sure Gamble from your grip to gain 9[credit].
Runner	2	play event	Spend [click] to play Jailbreak from your grip, making a run on R&D. The run is successful, so you draw 1 card. Then you access 2 cards from R&D, one at a time. You access Offworld Office — you must steal this agenda and place it in your score area. You then access Tithe, which you must leave on top of R&D. Your identity triggers: since you accessed 2 cards, you gain 2[credit]. Offworld Office is worth 2 out of the 7 points you need to win. Since it was stolen and not scored, its ability does not trigger.
Runner	3	run	Spend [click] to make a run on the remote server. You approach the ICE protecting the remote. The Corp has now the opportunity to respond: the Corp spends 3[credit] to rez Palisade. You encounter the ICE with nothing installed to interface with it yet, so all its subroutines fire: End the run. The run ends unsuccessfully.
Runner	4	draw	Spend your final [click] to draw 1 card from your <i>stack</i> (your deck) into your <i>grip</i> (your hand).
Corp	5	draw	Draw 1 card from R&D into HQ. <i>(Mandatory draw.)</i>
Corp	6	advance	Advance Superconducting Hub. It now has 2 tokens. <i>(This costs you [click] and 1[credit].)</i>
Corp	7	advance + score	Advance Superconducting Hub again. It now meets its advancement requirement. Score it: reveal it, place it in your score area, and remove all advancement counters from it. On score, Superconducting Hub triggers and you draw 2 cards. You will also have +2 hand size for as long as it remains in your score area. Superconducting Hub is worth 1 out of the 7 points you need to win.
Corp	8	install	Install Tithe face down protecting R&D.
Runner	5	install	Install Desperado from your grip. <i>(This costs you [click] and 3[credit].)</i>
Runner	6	run	Make a run on R&D. You approach the ICE protecting R&D. The Corp rezzes Tithe (<i>paying 1[credit]</i>). You cannot interface with it, so all its subroutines fire: Take 1 net damage (<i>you discard 1 card at random — if you had no cards in hand and took damage, you would be flatlined and lost the game</i>), then the Corp gains 1[credit]. You pass the ice, since there were no 'End the run.' subroutines on Tithe. The run is successful. Desperado triggers: gain 1[credit]. Access 1 card from R&D — [TBD] you must leave it on top. Your identity triggers: gain 1[credit].
Runner	7	install	Install Verbal Plasticity.
Runner	8	draw	Use the basic action to draw 1 card. Verbal Plasticity replaces this effect: you draw 2 cards instead.
Corp	9	draw	Draw 1 card from R&D into HQ. <i>(Mandatory draw.)</i>
Corp	10	play operation	Play Beanstalk Royalties to gain 3[credit].
Corp	11	install + rez	Install Regolith Mining License face down in your remote server, behind Palisade. Right after this action, rez Regolith Mining License by spending 2[credit]. <i>(The Corp has the opportunity to rez non-ICE cards at many times, such as before and after each click.)</i> Place 15[credit] from the bank on Regolith Mining License.
Corp	12	action	Take the action on Regolith Mining License to take 3[credit] from it and add them to your credit pool. <i>(This spends your final [click].)</i>
Runner	9	play event	Play Clean Getaway. This makes you run a server of your choice. Choose HQ, as it's currently unprotected. The run is successful, so Clean Getaway gives you 6[credit] and Desperado gives you 1[credit]. You access 1 random card from HQ. Your identity triggers: you gain 1[credit]. You reveal the accessed card.
Runner	10	install	Install Curupira.
Runner	11	run	Use the basic action to make a run on the remote server. You approach then encounter Palisade. Use Curupira: you pay 3[credit] to increase its strength by 3, matching Palisade's strength. Since the strength is equal or more than the ICE's, Curupira <i>interfaces</i> with Palisade: you can now pay 1[credit] to break 1 <i>barrier</i> subroutine. Palisade is indeed a barrier, so you decide to break its single subroutine. <i>(Since this piece of ICE was fully broken, a power counter is added to Curupira for later use.)</i> You then pass the ICE and proceed. The run is successful and Desperado triggers: you gain 1[credit]. You finally access Regolith Mining License and reveal it (<i>it does not become rezzed</i>). This card can be trashed for 3[credit] (it has a little bin icon on the bottom right corner), so you decide to trash it.
Runner	12	free	Now you are on your own — you may take any action you want!
